CARBON REDUCTION POLICY

Omega Asbestos Consulting recognises that the energy, products and services it consumes cause the emission of greenhouse gases to the atmosphere, which contribute to climate change.

As part of our overall sustainability goals, we are committed to continual improvement in the management and reduction of energy consumption and carbon emissions. Our aim is to:

- Manage energy consumption via a systematic, auditable energy management system, in line with ISO50001
- Ensure continual compliance with energy related legislation, best practice and corporate commitments to reduce our impact on climate change
- Ensure any new development contributes to the sustainable energy strategy
- Continually improve the energy efficiency of our existing buildings and practices
- Regularly monitor and review energy consumption against our reduction targets
- Ensure the availability of information and necessary resources are made available to achieve these goals, cost-effectively
- Manage our Scope 3 emissions from waste, water, transport, products and services, via our ISO14001 Environmental Management System
- Promote energy awareness among our staff and supply chain
- Communicate progress to internal and external interested parties

This Policy will be reviewed annually or when material changes to the business occurs, to ensure that it continues to be relevant and fit for purpose.
